Chetan Wadhwa

Backend engineer building systems that misbehave once more than one person shows up | Node.js, Redis, WebSockets | exploring agentic AI
Greater Delhi Area

Summary

Hi, I'm Chetan. I build backend systems — and they get interesting to me right at the point the happy path stops being enough. State disagreements, backed-up queues, an agent that isn't sure what to do next — that's usually where the real engineering starts. A few systems I've shipped: → CoreWire — a real-time collaborative code workspace built for low-latency technical interviews, where every keystroke is shared state across clients. → Tunesta — a personal music vault I first built for my brother: a Spotify-style UI for songs no streaming service carries. → CarbonCopy — an AI agent that represents me, and knows when to stop guessing and loop me in instead of answering on my behalf. Talk to it directly — carbon-copy-my-digital-replica.onrender.com (give it a few seconds, it sleeps when idle). Currently on the workbench: C-Flux, an async RAG pipeline (Redis queues, Pinecone, background workers). I've paused active development while I go deep on agentic systems — the plan is to bring it back able to reason and act, not just retrieve and answer. Stack, traced to where it's actually used, not just listed: • Node.js, Express, WebSockets, Redis — the real-time/backend core behind CoreWire and C-Flux. CoreWire requires Decoupling for now :) • MongoDB — Tunesta, CoreWire • Pinecone — C-Flux's retrieval layer • Python — CarbonCopy's agent logic specifically; my day-to-day stack is JS/TS • React, Tailwind — frontend for CoreWire and Tunesta More of my work: chetanwadhwa.vercel.appCode: github.com/Chetanwadhwa03 If you're working on something with an interesting backend problem in it, I'd like to hear about it

Experience

AMY Softech Pvt Ltd
Frontend Developer
June 2024 - July 2024 (2 months)
Noida, Uttar Pradesh, India

Built the logic to switch form views between "Customer" and "Business" registrations using Vanilla JS, ensuring only relevant fields like Company Details or MOH numbers are displayed based on user selection.

Engineered validation scripts for login and registration modules to enforce character limits (e.g., 30-character name limit, 80-character address limit) and email formatting to prevent invalid data submission.

Developed an interactive complaint submission form for guest users, utilizing DOM manipulation to provide real-time UI feedback and ensure all mandatory fields are completed before processing

Education

Maharaja Surajmal Institute Of Technology

Bachelor of Technology, Electronics and Communications Engineering · (November 2022 - July 2026)

Rashtra shakti Vidyalaya

Senior Secondary Education · (March 2012 - March 2021)
